

i3SYNC Tender Specs

A presenting device for wireless streaming of video & audio in full HD quality. It consists of a transmitter and receiver that constitute a wireless connection between a mobile device and a touch display. The device is compatible with all HDMI, DisplayPort or Mini DisplayPort devices and all operating systems: Windows, Mac, Android and Linux.

It's a plug & play device; the transmitter is plugged into the mobile device and the receiver into the presentation screen. There's no need to install drivers, open applications or execute programs.

It's possible to connect up to 3 transmitters to 1 receiver. One push on the button of the transmitter allows the user to instantly share the screen of his mobile device on the main presentation screen. The home screen features a preview function that shows all connected devices and offers the possibility to lock specific transmitters. In PowerPoint, the user can use the unique extended desktop function to see all his notes as well as the next slide.

The transmitters can be optionally charged in a charge station that is equipped with 3 Micro USB pins. The accessory tray leaves ample room for storing cables and other accessories.
